
S1E11 - Tweaking the Tangled Web

Nicholas Morrison nick@nanocat.net

Connecting

Connect to the lab server:

```
local$ ssh-keygen -R netlab.nanocat.net
```

```
local$ ssh lab@netlab.nanocat.net
```

Password: (see discord)

Connect to your router:

```
lab@netlab$ list-routers
```

<- list all lab routers

```
lab@netlab$ list-pcs
```

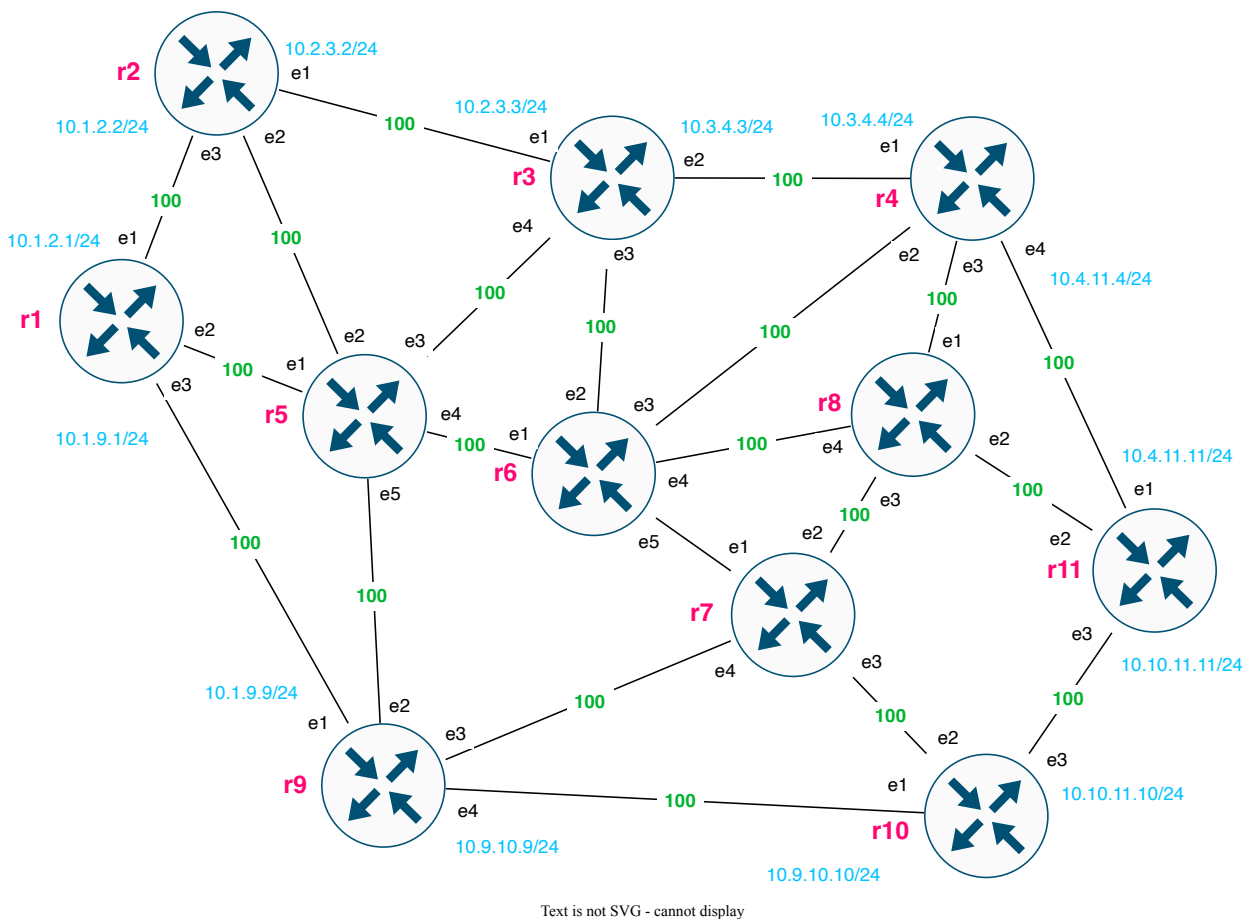

<- list all lab PCs

```
lab@netlab$ docker exec -it clab-clintro-r7 Cli
```

<- connect to your router

Topology

Topology: a-tangled-web

Goal

- mess with RIP
- mess with OSPF

Steps (Bird's-Eye View)

- Enable RIP
- Run a traceroute from r1 to r11
- Figure out ways to change that route
- Swap out RIP for OSPF
- Run a traceroute from r1 to r11
- Figure out ways to change that route

Enable RIP

```
!  
router rip  
  no shutdown  
  network 10.0.0.0/8  
!
```

This `network` line will include any interface with an IP address in the 10.0.0.0/8 range (ie, any address starting with a 10)

Run a traceroute from r1 to r11

```
r1#show ip route  
r1#show ip route 11.11.11.11  
r1#traceroute 11.11.11.11  
...
```

Shutdown an interface to force the route to change

On r1,

```
!  
interface eth2  
  shutdown  
!
```

Then show ip route, and traceroute again.

```
r1#show ip route  
r1#traceroute 11.11.11.11
```

Shutdown an interface on another router

On r1,

```
!  
interface eth2  
  no shutdown  
!
```

On r5,

```
!  
interface eth4  
    shutdown  
!
```

Traceroute!

Enable OSPF

On all routers:

```
router ospf 100  
    ! run ospf on *every* interface  
    network 0.0.0.0/0 area 0  
!
```

Traceroute!

Shutdown an interface

```
!  
interface ethX  
    shutdown  
!
```

Traceroute!

Adjust interface costs

See costs:

```
rX#show ip ospf interface brief  
(observe the COST field)
```

Change costs:

```
!  
interface ethX  
    ip ospf cost 432  
!
```

Check the change:

```
rX#show ip ospf interface brief
```

Check your routing table, traceroute!
